

A large orange circle is positioned on the left side of the slide, partially overlapping the text. The text "Reactive Streams in Java" is written in white, bold, sans-serif font. The word "Reactive" is on the top line, "Streams in" is on the second line, and "Java" is on the third line. The orange circle is behind the words "Reactive", "Streams", and "Java".

Reactive Streams in Java

Are there differences between Streams, Java Streams and Reactive Streams?

Streams and observables are often used interchangeably, but some say there is a difference between them. So what is it all about? While I was...

Observables

6 min read

well...sort of

ONE THING IN ADVANCE

A **stream** is simply
“a sequence of data elements
made available over time”

Szenario 1

Alice is
at work

order Pizza
at restaurant

wait until
Pizza is
ready

Pick up Bob
Watch a movie
with Bob

Szenario 2

at work

go home

Start
eating pizza

order Pizza
online

Call Bob to
come over

Watch movie
without Bob

Szenario 3

at work

go home

order Pizza
online

Call Bob to
come over

wait
for Bob

Start
eating pizza

Watch movie
with Bob

Reactive

What is Reactive Programming?

a programming paradigm
relying on events

```
1 var counter = 0;  
2 $: doubled = counter * 2;
```

**Reactive programming is
programming with
asynchronous data streams.**

Andre Staltz
(Creator of XStream)

The Two Main Patterns of Reactive Programming

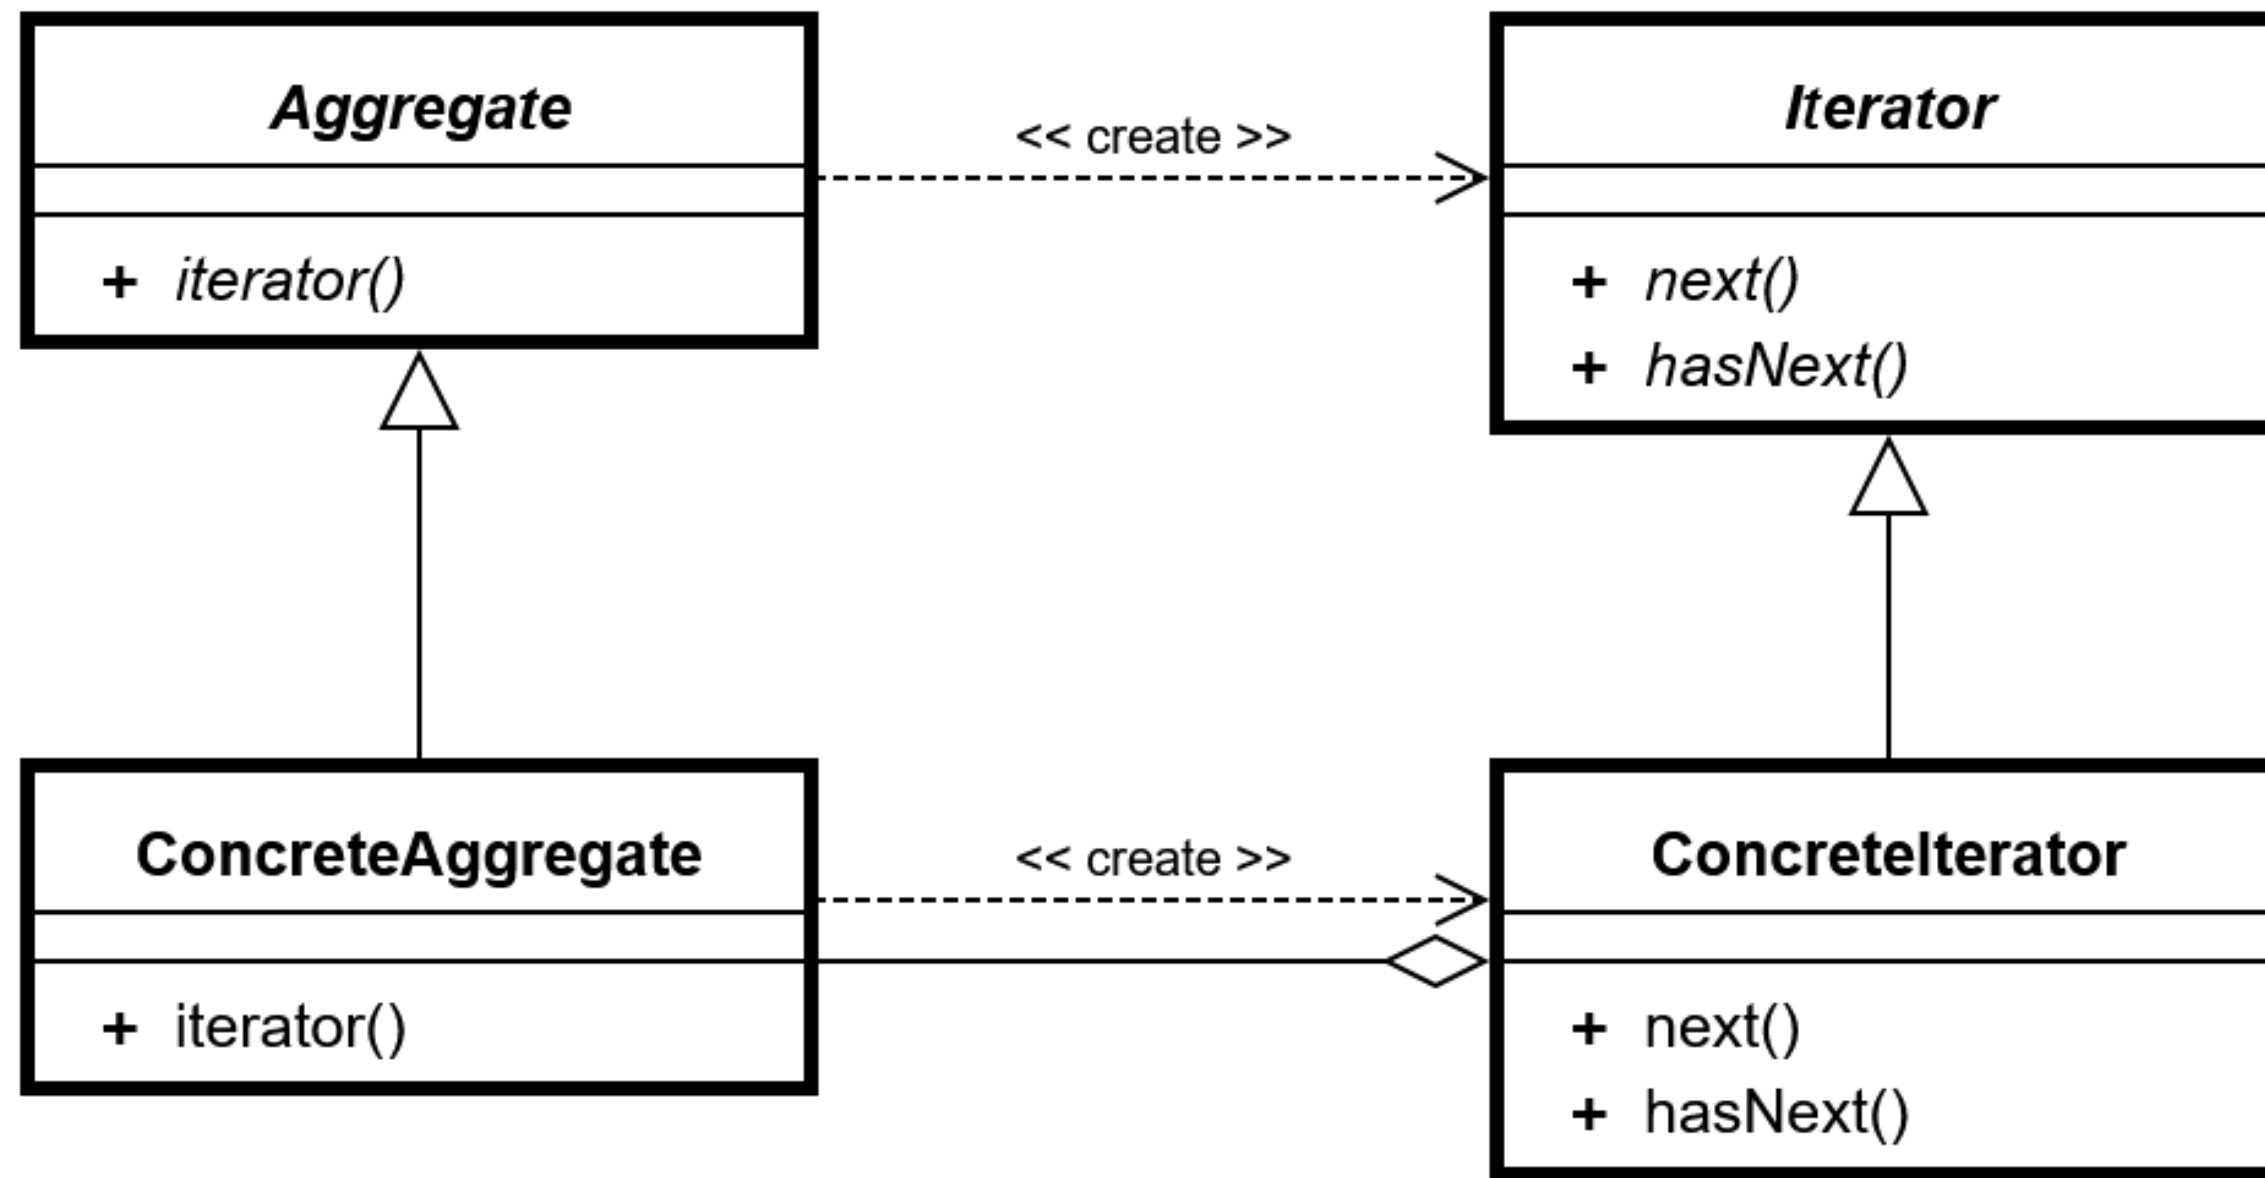

01

Iterator Pattern

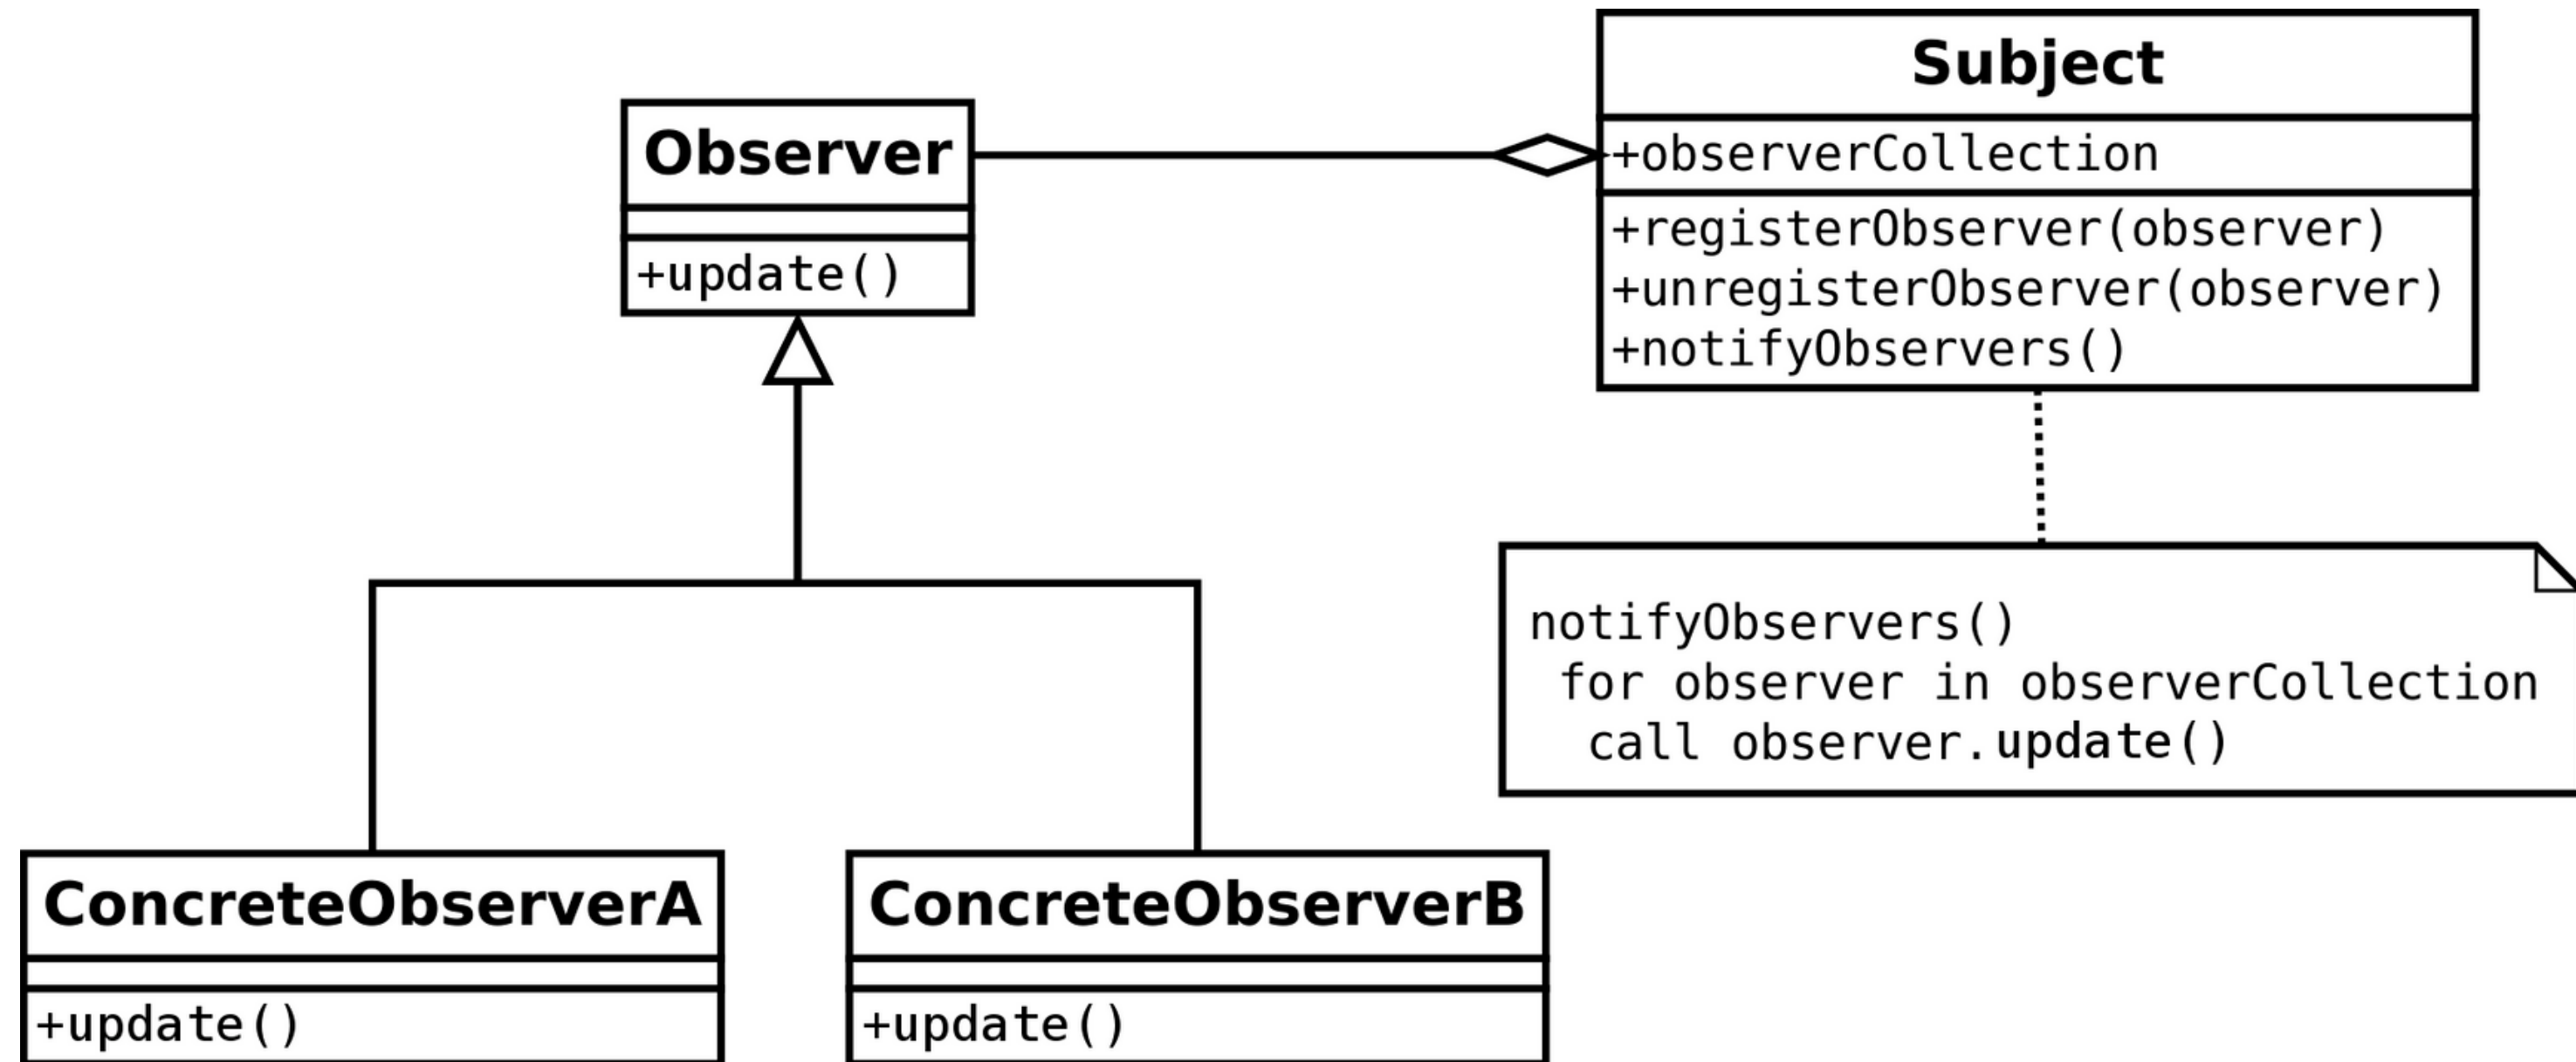

02

Observer Pattern

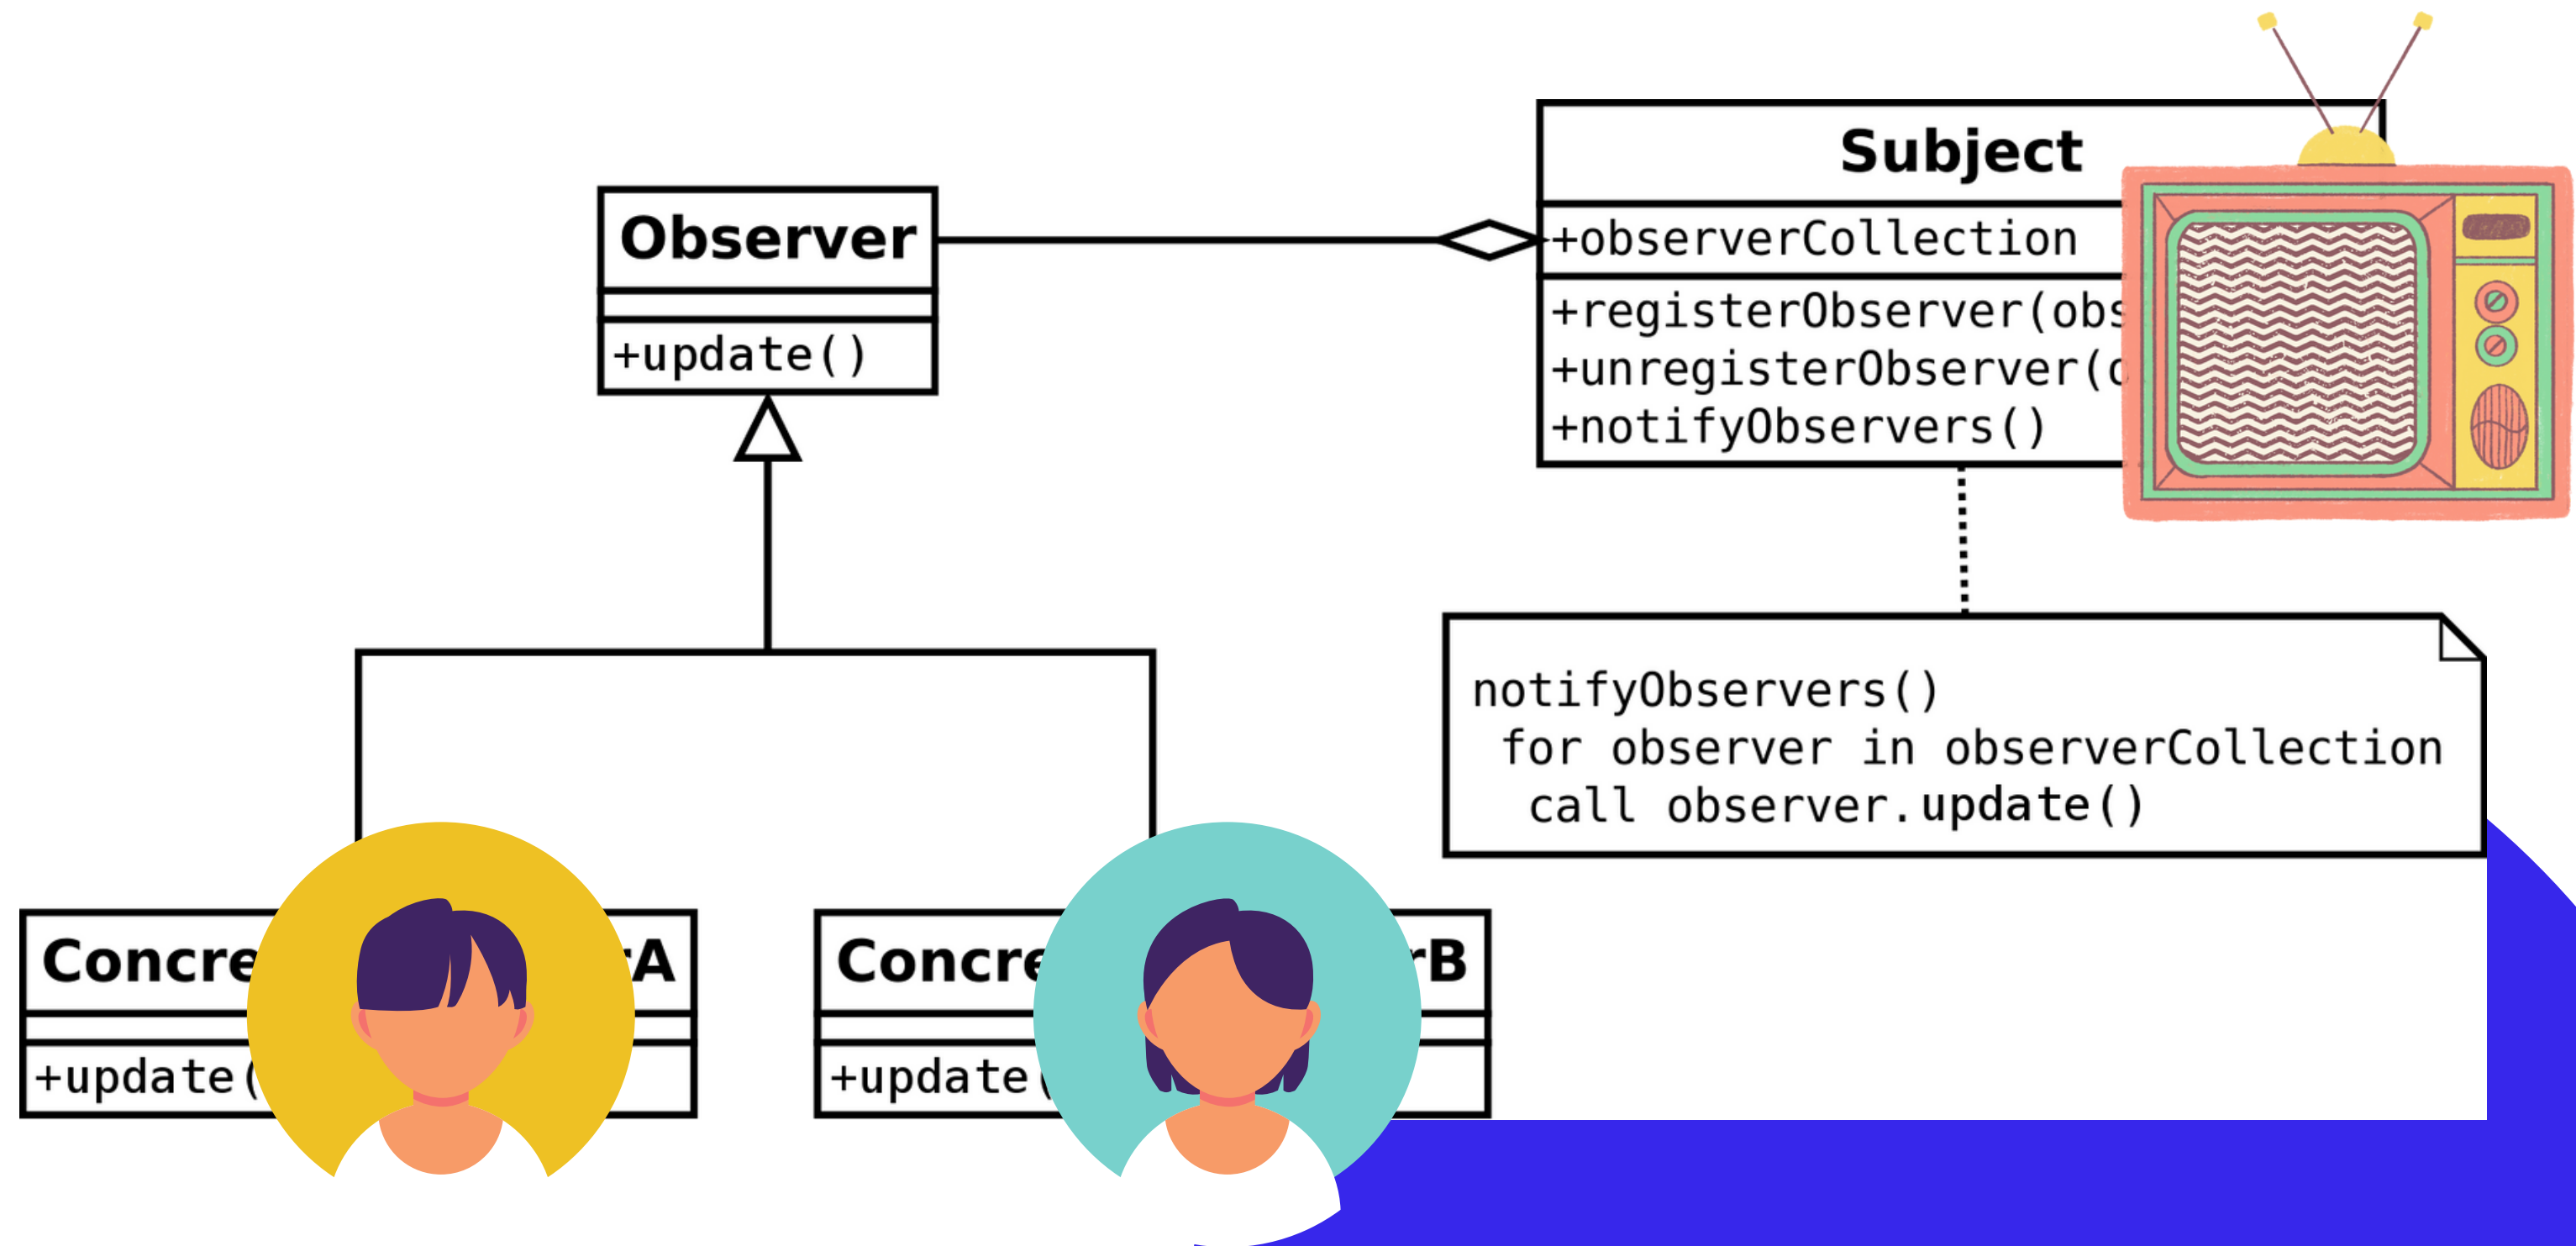

State: Iterator

Communication: Observer

Communication: Observer

Triad of Programming

01

State Management

02

Flow Control

03

Code Volume

We believe that the major contributor to this complexity in many systems is the **handling of state** and the burden that this adds when trying to analyze and reason about the system. Other closely related contributors are **code volume**, and explicit concern with the **flow of control** through the system.

JAVA STREAMS?

Java Streams are pull-based,
just like functions.

Not asynchronous.

SHOW ME CODE

CONCLUSION

JAVA STREAMS

- pull-based
- synchronous

OBSERVABLES

- an Object that has a function `"registerObserver(observer)"`
- Observable is the Subject being observed

REACTIVE STREAM/OBSERVABLE STREAM/OBSERVABLE SEQUENCE

- push-based
- asynchronous
- used in reactive Programming
- Since Java 9: Flow interface
